

Investment objective

SHUAA Global Equity Fund, a Sub-Fund of SHUAA Funds OEIC ICC Limited, is an actively managed fund focused on maximizing capital growth through a diversified portfolio of Sharia-compliant global equities. The Sub-Fund targets high-quality, high-growth businesses that we believe are currently undervalued. The Fund invests across most sectors and regions globally.

Fund Manager Commentary

Markets rallied this month as technology performed strongly despite an escalation in the Middle East that saw the oil price rebound by 7%. The S&P added 2.6% with the tech heavy Nasdaq leading the way up around 5% and the smaller cap Russell adding just 0.9%. With technology in favor again then Emerging Markets added over 3% driven by Taiwan up 7% and Korea 3%. Japan also outperformed on the back of its significant technology exposure. Europe on the other hand does not have many of the companies benefitting from AI and remained flat over the month.

Tech leadership has now been claimed by the software sector that had lagged over the past year on concerns that AI could replace their business model. Another set of strong results however, with many software firms seeing accelerating growth because they are incorporating AI into their products, has forced the market to rethink its position. The likes of Salesforce and ServiceNow soared 40% and 33% respectively, along with many in the sector as they showed evidence that revenue growth was accelerating due to their incorporation of AI into their products. The sector has long been under pressure in the belief that software would be replaced by AI, but it appears more likely it will enhance their product set and lead to new growth opportunities. The sector has derated significantly so could continue to rally as multiples expand with growth.

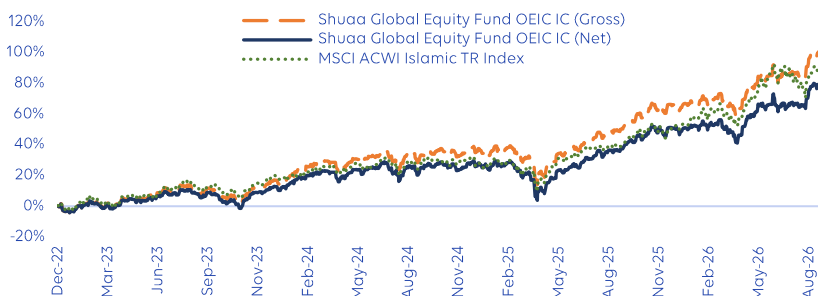

Elsewhere after intervention in the US bond market by the treasury, the dollar fell and haven assets such as gold and bitcoin jumped, helping gold miners such as Newmont rally 34%. In Health Care Merck announced a breakthrough with personalized cancer care, building medicine that is made for a specific individual. This drove the sector on a whole higher with Merck and Pfizer adding 14% on hope that this technique will lead to a whole new type of treatment for many illnesses. Korea also benefitted from more optimism around AI growth with battery storage systems seeing high demand from data centers to provide a back up power source, with Samsung SDI rising 49% on these dynamics.

After a meaningful correction in the AI supply chain during July, strong results and more importantly bullish forecasts for growth into 2027 has seen these businesses come back into favor. With multiples at more attractive levels than at their heights, and investor positioning now less crowded, then we would expect the AI complex to continue to rally into the year end. Conversely, outside of the AI ecosystem, the economy and consumer spending remains quite weak which likely weighs on consumer facing stocks. We have been adding to our AI exposure after the correction in the expectation that these resume their outperformance over the remainder of the year.
